SINGAPORE CIVIL DEFENCE FORCE

Date : 1 Sep 2021 **Our Ref**: CD/FSSD/12/02/03/01

Registrar, Board of Architects
Registrar, Professional Engineers Board
President, Singapore Institute of Architects
President, Institution of Engineers, Singapore
President, Association of Consulting Engineers, Singapore

Dear Sir/Mdm,

AMENDMENTS TO FIRE CODE 2018 - 9th BATCH OF AMENDMENTS

SCDF would like to issue the 9th batch of amendments to the Code of Practice for Fire Precautions in Buildings 2018 (Fire Code 2018). The amendments which were deliberated and accepted by the Fire Code Review Committee are attached as Annex A & Annex B of this circular.

2. Amendments stipulated in this Annexes shall take effect from the dates specified therein. For those amendments that are to take effect at future dates as specified in Annex A, Qualified Persons are encouraged to comply with the requirements before the effective dates. Any proposed plans of fire safety works for new buildings or existing buildings that are submitted to SCDF for approval on or after the effective dates shall be subjected to the amendments made to the Fire Code.

3. Please convey the contents of this circular to members of your Board/ Institution/ Association. This circular is also available in CORENET's e-Info: http://www.corenet.gov.sg/einfo.

HQ SINGAPORE CIVIL DEFENCE FORCE, 91 UBI AVENUE 4, SINGAPORE 408827
TEL: 68481467 FAX: 68481490 EMAIL:TAN_Chung_Yee@scdf.gov.sg

4. For general queries, you may contact Mr Randy Tan at DID: 68481461 or Mr Tan Yi Yang at DID: 68481734. However, for specific edits made to regulated fire safety products/materials, please contact CPT Daven Tan at 68481408.

Yours faithfully

(transmitted via email)

Annex A

S/N	Clause No	Amendment Date	Effective Date	Clause Status	Clause Before Amendment	Clause After Amendment
1	1.1.2	01/09/2021	01/03/2022	Revised/ Clarification	Fire safety requirements for laboratories handling hazardous chemicals Laboratories storing and using chemicals/HazMat shall comply with SS 641.	Fire safety requirements for laboratories handling hazardous chemicals Laboratories storing and using chemicals/HazMat shall comply with SS 641. For the purpose of designing the ventilation system to limit the amount of flammable vapour/gases inside the laboratory, fresh air shall be drawn directly from an external space or air well.
2	1.4.35	01/09/2021	01/03/2022	Revised/ Clarification	Electromagnetic or electromechanical locking device "Electromagnetic" or "electromechanical locking device" refers to a fail-safe device which provides access control. This device is designed to automatically unlock doors in the event of a fire, thereby helping to facilitate evacuation. An electromagnetic/electromechanical locking device shall be provided with a means of manual override located within the occupied space, 1.2m above the floor and within 1.5m of the door jamb.	Electromagnetic or electromechanical locking device "Electromagnetic" or "electromechanical locking device" refers to a fail-safe device which provides egress access control. In the event of a fire alarm activation, failure of building power supply, and/or any fault in the locking devices/components, related to the release of locking mechanism, this device shall: a. automatically unlock doors immediately to facilitate egress, and remain so until power supply is restored; and

						b. be provided with a means of manual override located within the occupied space, 1.2m above the floor and within 1.5m of the door jamb.
3	2.4.1	01/09/2021	01/03/2022	Revised/ Clarification	General a. The following buildings/usages are exempted from these requirements: (1) ……. (2) ……. (3) …… (4) non-residential buildings/usages, such as car parks and clubhouses located within residential developments and which are intended for ancillary use, are not required to comply with these requirements; and (5) aboveground storeys of PG III to VIII buildings, which are not served by any lift.	General a. The following buildings/usages are exempted from these requirements: (1) ……. (2) ……. (3) …… (4) non-residential buildings/usages, such as car parks, ~~and~~ clubhouses and gardens/terraces located within residential developments and which are intended for ancillary use, are not required to comply with these requirements; and (5) ~~aboveground storeys of~~ PG III to VIII buildings~~, which~~ that are not served by any lift.
4	3.5.3e.	01/09/2021	01/09/2021	Clarification	Extent of unprotected openings	~~Extent of unprotected openings~~

					(1) The extent of unprotected openings in an external wall of a building under PG I, in relation to its distance from the relevant boundary, can be based on the internal room/space in the building that has the largest extent of unprotected openings to comply with *Table 1* of *Annex 3B*. (2) Internal walls enclosing the room/space in the building are not required to be fire-rated, but shall be constructed of non-combustible materials, except glazing.	~~(1) The extent of unprotected openings in an external wall of a building under PG I, in relation to its distance from the relevant boundary, can be based on the internal room/space in the building that has the largest extent of unprotected openings to comply with *Table 1* of *Annex 3B*.~~ ~~(2) Internal walls enclosing the room/space in the building are not required to be fire-rated, but shall be constructed of non-combustible materials, except glazing.~~ *Note: The above strike-through will be omitted and duplicated in Cl.9.1.1c..*
5	3.15.14	01/09/2021	01/03/2022	Revised/ Clarification	Fire-rated glass In buildings which are protected by an automatic sprinkler system, fire-rated glass can be used for the construction of compartment walls, compartment floors, enclosures of smoke-free lobbies and fire lift lobbies, and protected shafts not containing exit staircase and fire lift, subject to the following: a. the walls and doors shall have the necessary fire resistance, including	Fire-rated glass In buildings which are protected by an automatic sprinkler system, fire-rated glass can be used for the construction of compartment walls, compartment floors, enclosures of smoke-free lobbies and fire lift lobbies, and protected shafts not containing exit staircase and fire lift, subject to the following: a. the walls ~~and doors~~ shall have the necessary fire resistance, including

					insulation, when subject to test under BS 476 Part 20-23; and b. the walls and doors shall meet the requirement of Class A for Impact performance when tested under BS 6206 and EN 12600 or AS 2208.	insulation, when subject to test under BS 476 Part 20-23; and b. the doors shall have the necessary fire resistance, including insulation, when subject to test under SS 332 or EN 1634-1; and c. the walls and doors shall meet the requirement of Class A for Impact performance when tested under ~~BS 6206 and EN 12600 or AS 2208~~.under AS 2208 or Class 1 for Impact Level (drop height class) when tested under EN 12600.
6	4.2.2a.(3)	01/09/2021	01/03/2022	Revised/ Clarification	Fire engine accessway and fire engine access road (3) PG II buildings exceeding 10m habitable height For a building under PG II that exceeds the habitable height of 10m, all of the following shall be complied with: (a) A fire engine accessway/fire engine access road shall be provided within a travel distance of 18m to the entrance of all exit staircases	Fire engine accessway and fire engine access road (3) PG II buildings exceeding 10m habitable height For a building under PG II that exceeds the habitable height of 10m, all of the following shall be complied with: (a) A fire engine accessway/fire engine access road shall be provided within a travel distance of 18m to the entrance of all exit staircases where the

					where the landing valves (dry or wet riser) are provided. (b) A fire engine accessway shall be provided to access at least one entire façade of each block and shall be located at a distance of at least 2m and at most 10m away from the façade of the building. (c) The fire engine accessway shall be designed to meet the specifications stipulated in *Table 4.2A*, *Table 4.2D* and *Table 4.2E*.	landing valves (dry or wet riser) are provided~~.~~ in accordance with *Cl.6.2.2b.*. (b) A fire engine accessway of at least ¼ length of perimeter (minimum 15m), whichever is greater, shall be provided to access at least one ~~entire~~ façade of each block and shall be located at a distance of at least 2m and at most 10m away from the façade of the building. This is to facilitate rescue with direct access to unit windows (excluding exit staircase, smoke-free approach to exit staircase). (c) The fire engine accessway shall be designed to meet the specifications stipulated in *Table 4.2A*, *Table 4.2D* and *Table 4.2E*.
7	4.2.2a.(5)	01/09/2021	01/03/2022	Revised/ Clarification	Basement In the case of a basement, the fire engine accessway/fire engine access road shall be provided to within a travel distance of 18m to the entrance of all exit staircases that are provided with landing valves (dry or wet	Basement In the case of a basement, the fire engine accessway/fire engine access road shall be provided to within a travel distance of 18m to the entrance of all exit staircases where the landing valves (dry or wet riser) are

					riser) in accordance with *Cl.6.2.2b.*. The measurement of 18m shall be between the fire engine accessway/fire engine access road and the entrance of exit staircase.	provided ~~that are provided with landing valves (dry or wet riser)~~ in accordance with *Cl.6.2.2b.*. The measurement of 18m shall be between the fire engine accessway/fire engine access road and the entrance of exit staircase.
8	4.2.3b.	01/09/2021	01/09/2021	Clarification	b. Location The fire access opening shall be placed against an occupied space. It shall not be placed at plant/store room, exit staircase, smoke-stop/fire lift lobby or space that leads only to a dead end.	b. Location The fire access opening shall be placed against an occupied space. It shall not be placed at plant/store room, exit staircase, ~~smoke-stop/fire lift lobby,~~ smoke-free approach to exit staircase or space that leads only to a dead end.
9	4.4.2	01/09/2021	01/09/2021	Clarification /Relaxation	Water supply for private fire hydrant a. Private fire hydrant at or below reduced level 125m (1) Private fire hydrants installed at reduced level 125m and below can receive direct supply from public water mains provided the flow and pressure from the public water mains meet the fire hydrant requirements as shown in ***Table 4.4A***, or the following requirements are complied with:	Water supply for private fire hydrant a. Private fire hydrant at or below reduced level 125m (1) Private fire hydrants installed at reduced level 125m and below can receive direct supply from public water mains provided the flow and pressure from the public water mains meet the fire hydrant requirements as shown in ***Table 4.4A***, or the following requirements are complied with:

					(a) the AFA of the largest compartment shall not exceed 1000m² for PG III, IV, V & VII and not exceed 500m² for PG VI & VIII; (b) ……	(a) the AFA of the largest compartment shall not exceed 1000m² for PG III, IV, V & VII and not exceed 500m² for PG VI & VIII buildings. No AFA limit for covered car park in PG II, III, IV, V & VII buildings; (b) ……
10	6.2.6	01/09/2021	01/09/2021	Clarification	Building under construction When a building in pursuance of *Cl.6.2.1*, is required to be equipped with rising mains, such rising mains shall be installed progressively as the building attains height during the course of construction. All outlets, landing valves and inlets, water tanks and pumps, and hydrants shall be properly installed so as to be readily operational in case of fire.	Building under construction When a building in pursuance of *Cl.6.2.1*, is required to be equipped with rising mains, such rising mains shall be installed progressively as required under *Cl.9.9.3* ~~the building attains height~~ during the course of construction. All outlets, landing valves and inlets, water tanks and pumps, and hydrants shall be properly installed so as to be readily operational in case of fire.
11	6.3.9	01/09/2021	01/09/2021	Clarification	Sprinkler-protected building Where sprinkler system is required by this Code, provision of automatic thermal/smoke detectors in sprinkler-protected premises will be exempted except where such detectors are	Sprinkler-protected building Where sprinkler system is required by this Code, provision of automatic thermal/smoke detectors in sprinkler-protected premises is ~~will be~~ exempted except where such detectors are required to activate/~~or~~ operate the sprinkler,

					required to activate or operate the sprinkler or other systems.	engineered smoke control system or other systems.
12	6.3.10	01/09/2021	01/03/2022	Revised/ Clarification	Exemption of automatic fire alarm protection The following areas are exempted from automatic fire alarm protection in an automatic fire alarm building: a. areas which are covered with trellises, louvres or perforated panels having 50% or more evenly distributed effective free openings; and b. external open-sided linkways not exceeding 5m in width measured from eave to eave, provided these areas are not for commercial activities or storage.	Exemption of automatic fire alarm protection The following areas are exempted from automatic fire alarm protection in an automatic fire alarm building: a. ~~areas which are covered with trellises, louvres or perforated panels having 50% or more evenly distributed effective free openings; and~~ External open-sided linkways not exceeding 5m in width measured from eave to eave, provided these areas are not for commercial activities or storage. b. ~~external open-sided linkways not exceeding 5m in width measured from eave to eave, provided these areas are not for commercial activities or storage.~~ Areas which are covered with trellises, louvres or perforated panels having 50% or more evenly distributed effective free openings. An alarm sounder and visual alarm shall be provided near the exit staircase in accordance with SS 645.

						c. Open-to-sky roof gardens/terraces located within PG II buildings or mixed-use residential buildings, provided there are no covered commercial activities/spaces at the open-to-sky roof gardens/terraces. When there is other non-residential occupancy other than the open-to-sky roof gardens/terraces located within the same PG II building, the alarm sounder and visual alarm shall be extended to the open-to-sky roof gardens/terraces and positioned near the exit staircase in accordance with SS 645.
13	6.4.1	01/09/2021	01/09/2021	Clarification	Provision The following shall be provided with an automatic sprinkler system: a. Compartment size Whenever compartmentation requirements under Chapter 3 of this Code cannot be complied with. b. …….	Provision Every storey/room of a building, unless otherwise exempted by this Code, ~~The following~~ shall be ~~provided~~ protected by ~~with~~ an automatic sprinkler system under the following situations: a. Compartment size Whenever compartmentation requirements under *Table 3.2A* of Chapter 3 of this Code cannot be complied with. b. …… .

14	6.4.1f.	01/09/2021	01/03/2022	Revised/ Clarification	Provision f. Exemption of sprinkler protection All of the following areas not located within PG VI or VIII buildings are exempted from sprinkler protection in a sprinkler-protected building: (1) Canopies/car porches (a) Such areas are to be used solely for the purpose of passengers pick-up and drop-off. (b) There shall be no commercial activities or storage within these areas. (c) Cut-off sprinklers and fire-rated walls are not required to be provided to separate the sprinkler-protected and non-sprinkler-protected areas. (2) External corridor External corridors shall not exceed 4m in width, and	Provision f. Exemption of sprinkler protection All of the following areas not located within PG VI or VIII buildings are exempted from sprinkler protection in a sprinkler-protected building: (1) Canopies/car porches (a) Such areas are to be used solely for the purpose of passengers pick-up and drop-off. (b) There shall be no commercial activities or storage within these areas. 					For air well that has the same usage for all floors, the following coverings shall be used: (a) A fixed opening up to the third storey level with approved materials such as non-drip acrylic, non-drip polycarbonate and glass, is allowed, or (b) A fully openable covering (retractable or spring open type), by activation of smoke detectors and fire alarm system, up to the level below the roof eaves with, such as non-drip acrylic, non-drip polycarbonate and glass.	following coverings shall be used: (i) A fixed opening up to the third storey level with approved materials such as non-drip acrylic, non-drip polycarbonate and glass, is allowed, or (ii) A fully openable covering (retractable or spring open type), by activation of smoke detectors and fire alarm system, up to the level below the roof eaves with approved materials, such as non-drip acrylic, non-drip polycarbonate and glass. (b) For air well that has different usage for all floors, the following coverings shall be used: (i) A fixed covering up to the 2nd storey floor level with approved

						materials such as non-drip acrylic, non-drip polycarbonate and glass, or (ii) A fully openable covering (retractable or spring open type), by activation of smoke detectors and fire alarm system, up to the level below the roof eaves with approved materials such as non-drip acrylic, non-drip polycarbonate and glass. (c) The air well shall not be enclosed.
30	10.2.1	01/09/2021	01/03/2022	Revised/ Clarification	General This set of fire safety requirements shall be applicable to roof-mounted PV installations.	General This set of fire safety requirements shall be applicable to roof-mounted PV installations. For PV installations on the roof of PG I buildings, the requirements are stipulated in *Cl.9.1.1d.*.
31	10.2.2	01/09/2021	01/03/2022	Revised/ Clarification	Means of access	Means of access

					a. For PV installations on the roof, at least one exit staircase shall be provided. Where the area of non-habitable roof is large and one-way travel distance to the exit cannot be met, an additional cat ladder or ship ladder adequately separated from the exit staircase, in accordance with *Cl.2.3.12* and leading to the circulation area of the floor below shall be provided. b. For existing buildings which are carrying out the installation of PVs on the roof level where the provision of single exit staircase is not feasible, a portable sturdy ladder to the roof access shall be provided. Single storey buildings with roof height not more than 12m or inaccessible pitched roof up to 24m from grade level are not required to provide a sturdy ladder, if there is a fire engine accessway fronting this installation. c. The computation of travel distance for roof areas which are open to the sky for any purpose group (except PG I) can be based on the requirement for sprinkler-protected compartments/ buildings.	a. For PV installations on the roof, at least one exit staircase shall be provided. Where the area of non-habitable roof is large and one-way travel distance to the exit cannot be met, an additional cat ladder or ship ladder adequately separated from the exit staircase, in accordance with ~~*Cl.2.3.12*~~ *Cl.2.2.11* and leading to the circulation area of the floor below shall be provided. b. ~~For existing buildings which are carrying out the installation of PVs on the roof level where the provision of single exit staircase is not feasible, a portable sturdy ladder to the roof access shall be provided.~~ In situation for buildings where plans submission on the installation of PVs on the roof level was made on or before 16 June 2016, the provision of single exit staircase is not required. Instead, a cat/ship ladder to provide access to the roof shall be provided. c. In the case of single storey buildings with roof height not more than 12m or inaccessible pitched roof up to 24m from grade level access by either cat/ship ladder or if there is a fire engine accessway fronting this installation.

					d. All access hatches, if provided, shall be readily accessible from the roof. The access hatch opening shall have a minimum clear width of 1m in diameter.	d. The computation of travel distance for roof areas which are open to the sky for any purpose group ~~(except PG I)~~ can be based on the requirement for sprinkler-protected compartments/ buildings. e. All access hatches, if provided, shall be readily accessible from the roof. The access hatch opening shall have a minimum clear width of 1m in diameter.
32	10.4	01/09/2021	01/03/2022	New	Nil	Electric Vehicle (EV) Charging Installation 10.4.1 General The requirements in *Cl.10.4.2* are exempted for PG I buildings. 10.4.2 Emergency main isolation shut-off switches a. Each EV charging station shall be provided with at least one emergency main isolation shut-off switch(es) located such that no person need to travel more than 15m from the EV charging station and its parking lot(s) to reach a main isolation shut-off switch.

						b. If more than one EV charging station is provided, the main isolation shut-off switch(es) shall be provided such that no person need to travel more than 15m from any EV charging station and its associated parking lot(s) to reach a main isolation shut-off switch. c. Main isolation switch(es) shall be located on the same storey as the EV charging station(s) they serve. The purpose of such main isolation shut-off switch(es) is to provide a safe means of isolating the main electrical power supply to the entire EV charging system on the same storey. d. Every EV charging stations and EV parking lots shall be located at least 3m away from the nearest edge of any main isolation shut-off switches. <u>Exception</u>

						Main isolation shut-off switches can be allowed to be less than 3m from an EV charging station and its parking lot(s), as long as there is at least one other main isolation shut-off switch located at least 3m away but still within 15m of this EV charging station and its parking lot(s). e. Main isolation shut-off switches shall be located between 800mm and 1.2m above the finished floor level and shall be located in a clearly visible and easily accessible location. f. All main isolation shut-off switches shall be clearly labelled. Clear instructions shall be indicated on how to operate the main isolation shut-off switch. Signages shall be provided with a letter height of at least 50mm.

						g. Where main isolation shut-off switch(es) cannot be seen clearly or not within line of sight from the EV charging station and its parking lot(s), additional signages shall be provided to direct persons to the main isolation shut-off switch(es).
