

SCDF

The Life Saving Force

... for a safer Singapore

FSM Seminar 2024 - The Internet of Things Roadmap

George Wu

Fire Certification Inspection Officer

Fire Safety Department

Singapore Civil Defence Force

1. What is the Internet of Things (IoT)? 4. Challenges and Considerations

2. IoT Applications in Fire Safety Management

- Common Smart Sensors and Devices
- Other Smart Sensors and Devices Being Tried
- IoT Ecosystem

3. Case Study

- Case Study 1 - SCDF HQ Building
- Case Study 2 - Commercial Building (Events and Exhibitions)
- Case Study 3 - Industrial Building (Critical Infrastructure and Protected Installations)

5. IoT RoadMap

- Background
- IoT Roadmap for Fire Safety

IOT APPLICATIONS IN FIRE SAFETY MANAGEMENT

COMMON SMART SENSORS AND DEVICES

Smoke Detectors

Heat Sensors

Gas Detectors

Sprinkler Systems

Occupancy Sensors

OTHER SMART SENSORS AND DEVICES INSTALLED

Fire Extinguisher

Exit Sign

Emergency Light

Fire Pump System

Fully Integrated Cloud-Based IoT Fire Safety System

IOT ECOSYSTEM

REPORT GENERATION

PORTAL

APP

EMAIL

**OWNER / FACILITY
MANAGER**

MAINTENANCE CREW**

**FIRE SAFETY
PERSONNEL**

“THE KEY TO FIRE SAFETY IS PREVENTION, AND IOT IS THE TOOL THAT CAN MAKE IT A REALITY.”

CASE STUDY 1 – SCDF HQ BUILDING

Leading digital transformation efforts and foster a workforce that is both digitally prepared and innovation-oriented.

CASE STUDY 2 - COMMERCIAL BUILDING (EVENTS AND EXHIBITIONS)

In the commercial space, several buildings have conducted trials to study how IoT sensor technology helps with achieving operational efficiency for their facilities management team.

CASE STUDY 3 - INDUSTRIAL BUILDING (CRITICAL INFRASTRUCTURE AND PROTECTED INSTALLATIONS)

A number of industrial buildings are leveraging IoT sensors as enablers to enhance fire safety management by providing real-time monitoring of fire protection equipment, early detection of fire hazards, and automated responses.

CHALLENGES AND CONSIDERATIONS

- Data Security and Privacy Concerns
- Integration Challenges
- Interoperability Issues
- Cost Considerations
- Regulatory Compliance

DATA SECURITY AND PRIVACY CONCERNS

INTEGRATION CHALLENGES

- Technological Solutions
- Data Integration and Management
- Security and Compliance

INTEROPERABILITY ISSUES

- Standardization and Interoperability
- Middleware Solutions
- Security and Privacy

COST CONSIDERATIONS

- Government Grants and Subsidies
 1. Productivity Solutions Grant (PSG) for the Built Environment by IMDA and ESG
 2. SMEs Go Digital programme by IMDA
- Incentivising Fire Certification Renewal (In progress)

REGULATORY COMPLIANCE

IOT ROADMAP

This digital roadmap serves as a guide for you to follow on your digital journey.

STAGE 01	STAGE 02	STAGE 03
GETTING READY FOR THE DIGITAL ECONOMY Uplifted Digital Capabilities, Optimised Operations	GROWING IN THE DIGITAL ECONOMY Integrated Ecosystem, Streamlined Processes	LEAPING AHEAD Intelligent Business, Autonomous Operations
 3D Modelling, Immersive Visualisation and Analysis	 BIM for Asset Delivery/ Facilities Management	 Blockchain for Progress Verification
 Building Information Modelling (BIM)-to-Field (Hardware/Software)	 Built Environment Digital Platform	 Data and Artificial Intelligence (AI)-driven Decision Support System
 Coordination Tools and Collaboration Platform		
 Digital Wearables for Workers' Health and Safety	 Computational Design	 Intelligent National Productivity and Quality Specification (INPQS)
 e-Permit-to-work (e-PTW)		
 Facilities Management Workflow Automation (e.g. Smart Access, Energy Management and Smart Metering, Mobile Inspection, Digital Signage)	 Coordinated Regulatory Approvals and Rule-based Model Checker	 Robotics for Autonomous Construction and Facilities Management
 Quantity Surveying and Valuation		
 Site/Yard Management	 Integrated and Smart Worksite Monitoring and Inspection	
BUSINESS CAPABILITIES Accounting Management, Human Resource Management, Customer Relationship Management, Sales Management, Inventory Management, Fleet Management and Cybersecurity		

Note: This roadmap will be updated over time as digitalisation of the industry progresses and new technologies are introduced to the industry.

INDUSTRY TRANSFORMATION MAP

The Construction and Facilities Management Sector is crucial to Singapore's economy, creating safe, sustainable, and modern environments for living, working, and leisure, thereby enhancing the quality of life for Singaporeans

IOT ROADMAP FOR FIRE PROTECTION / SAFETY MANAGEMENT

Near-Term (1 - 2 years)

- Mostly localised sensing and capture of individual fire safety systems via main fire alarm panel
- Fragmented distribution of critical information and alerts are primitive and localized
- Non-scalable, proprietary IoT solutions (lack of interoperability)

Mid-Term (3 - 5 years)

- Centralised platform that can retrieve sensing and data from fire alarm panel
- Trigger automated alerts to all stakeholders for relevant follow up
- Plug & play scalable IoT solutions requiring little to no hard wiring
- E.g. IoT sensor for FE, exit signs, fire pumps, engineered smoke control system etc.

Long-Term (6 to 8 years)

- Predictive maintenance & Intelligent Trend Analysis
- Performance and portfolio benchmarking and comparison
- Remote inspection for licensing and fire certification

THE DESIRED FUTURE OF IOT IN FIRE SAFETY

Predictive Maintenance of Fire Alarm and Detection Systems
e.g. pump operational health indicating decrease in pump performance

Remote inspections, intelligent data analysis and submission for regulatory certifications
e.g. system linked to SCDF and future inspections can be conducted remotely and certificate applications can be automated.

Enhanced Emergency Response Coordination and Smart Evacuation
e.g. smart exit signs; real-time occupant geo-location etc.

TIMELINE FOR IOT DEVELOPMENT IN FIRE SAFETY

● 2022

- **Amendment of SS578** to include inspection by means of electronic monitoring of fire extinguisher

● 2023

- **Proof-of-concept (PoC) for integration of IoT sensors** with fire extinguishers, exit signs and emergency lights
- **FSM Seminar**: Utilising IoT to complement FSM Duties

● 2024

- **Review of SS563** to include electronic monitoring for emergency lighting and power supply
- **FSM Seminar**: IoT Roadmap for Fire Safety
- **Expand PoC for IoT -based integration** to other public buildings

● 2025 to 2026

- **Joint development and PoC with various stakeholders** such as SCDF, HTX, HDB and relevant vendors of IoT-based remote monitoring systems for rising mains, engineered smoke control systems with remote activation and real-time status monitoring including non-proprietary, SS 695 compliant cloud platform to aggregate all sensor data

● 2027

- **Review of relevant SS (i.e. SS575)** to include electronic monitoring for hydrants and rising mains

Thank You
